CAPSTONE 01 · PERSONAL AI OPERATING SYSTEM

Build the workspace you will actually keep using.

Most people start every Claude chat cold and re-explain the same context. Set up one Project, one Skill and one Connector around your own work, prove them on three real weekly tasks, and measure what they save you.

YOU SUBMIT	MODULES	TIME	YOU KEEP
One-page write-up and a short slide deck	2.4 Projects · 2.6 Skills · 4.1 Connectors	About six hours across one week	A working Claude workspace

WHAT YOU BUILD

MODULE 2.4

One Project

Your standing context. Every chat in it starts with your role and files loaded.

MINIMUM

- Instructions of 150+ words
- At least one uploaded file

MODULE 2.6

One Skill

Your most frequent output, written down once so it comes out right every time.

MINIMUM

- Built from a real past example
- Tested on two real inputs

MODULE 4.1

One Connector

Live data from a tool you use every week, such as Drive, Gmail or Calendar.

MINIMUM

- Your own account, not a demo
- One result checked at source

PROVEN ON THREE REAL WEEKLY TASKS

A writing task
A weekly update or a client email.

An analysis task
Reviewing a sheet or a report.

A question or plan
Preparing for a meeting or a decision.

Each runs end to end to a finished output. Between them, all three pieces are used.

WHAT YOU SUBMIT

The write-up — ONE PAGE

- What each piece does
- Three tasks, minutes before and after
- Weekly saving, with the sum shown
- What you changed after the first run

The slide deck — 6-8 SLIDES

- A walkthrough someone else could rebuild from
- Screenshots of the Project, Skill and Connector

HOW IT IS ASSESSED

CRITERION	WEIGHT
Setup is complete and specific	25
Used on real work, end to end	25
Saving is measured, not guessed	20
Refined after the first run	15
Someone else could rebuild it	15

GROUND RULES

— Use real work from your week. Invented tasks do not count.

— Remove client names and confidential figures before you submit.

— Finish each task to the point you would send it. A draft is not done.
