CAPSTONE 04 · VIBE-BUILT TOOL

Build one small tool that works, and put it in front of someone.

Use Claude Code to build a tracker, calculator, dashboard or landing page. Iterate three times, review it as if your name is on it, and share it with one person outside the course.

YOU SUBMIT	MODULE	TIME	YOU KEEP
HTML file or artifact link, plus a note	5.3 Claude Code	About five hours	A tool you actually use

WHAT YOU DO

MODULE 5.3

Build it

One page, one job, built from a short written spec.

MINIMUM

- Opens from one file or one link
- Runs on your real numbers or content

ITERATE

Ship version three

Each round fixes something you found by using it.

MINIMUM

- Three saved versions
- A reason written for each change

REVIEW AND SHARE

Own what you publish

Check it as a stranger would, then hand it over.

MINIMUM

- Review checklist completed
- One outside reaction, recorded

PICK SOMETHING SMALL ENOUGH TO FINISH

A tracker
Habits, leads, invoices or study hours, with totals.

A calculator
Pricing, budget split, fees, or time saved.

A dashboard or page
Your numbers on one screen, or a landing page for a real offer.

One screen, one job, no logins, no outside services. Small and working beats large and broken.

WHAT YOU SUBMIT

The tool — ONE FILE OR LINK

- Exported HTML file, or a link to the artifact
- Works when opened on a laptop and a phone

The note — ONE PAGE

- What it does, and who it is for
- What changed in each round, and why
- What you checked in review
- What your tester said

HOW IT IS ASSESSED

CRITERION	WEIGHT
It works, end to end	25
Iterations are real changes	20
Review is visible and specific	20
Tested by an outside person	20
The note is clear and honest	15

GROUND RULES

— No passwords, API keys or personal data inside the file.

— Do not share anything you have not opened and clicked through yourself.

— Your tester must be outside this course.
