CAPSTONE 05 · VISUAL SHOWCASE · SOLUTION BRIEF

How to build a demo someone can follow without you.

Nine steps. Pick one story first, so the dashboard, the design piece and the trick read as one demo rather than three exhibits.

TOTAL TIME	STEPS	WORKED EXAMPLE	PLAN
About six hours	Nine, in order	Meera's Diwali campaign recap	Pro or above, for Claude Design

HOW THE PIECES FIT

One story: a question your audience cares about

Meera's: "Did our Diwali campaign pay off, and what should we repeat next year?"

↓ answered by ↓

3.2 · THE EVIDENCE

Dashboard Artifact

The real numbers, interactive, checked by hand.

3.3 · THE MESSAGE

Claude Design piece

A one-pager or short deck that says what the numbers mean.

3.5, 7.8 · THE METHOD

One cool trick

A technique that made the work faster or better.

↓ combined into ↓

One walkthrough, doc and HTML

Numbered steps, exact prompts and screenshots, so a newcomer can make the same three things alone.

THE WEEK

DAY 1	DAY 2	DAY 3	DAY 4	DAY 5
Story and data	**Dashboard**	**Design and trick**	**Walkthrough**	**Test and submit**
Pick the story, clean the data.	Build it, then check every number.	Make the design piece, capture the trick.	Combine all three into one guide.	A newcomer follows it alone.
`Steps 01-02 · 50 min`	`Steps 03-04 · 1.5 h`	`Steps 05-06 · 1.5 h`	`Step 07 · 1.5 h`	`Steps 08-09 · 45 min`

BEFORE YOU START

- [ ] Pro or above. On Enterprise, an admin turns Claude Design on.
- [ ] A real dataset as a CSV or spreadsheet.
- [ ] Your brand guide or a document whose look you want to match.
- [ ] The trick lists from modules 3.5 and 7.8.
- [ ] One newcomer for step 08.

WORKED EXAMPLE · MEERA

Lumen's four-week Diwali campaign is over, and the founder wants to know whether it paid off. Meera builds a dashboard, a one-page recap in Claude Design, and uses a sketch-to-layout trick.

Menus move between releases. If a label differs, look under Customize or Settings.

01

20 MINUTES · DAY 1

Choose one story and one audience.

A showcase with no story is a gallery. Write the question first; every piece you build should answer part of it.

TEMPLATE · THE STORY

The question: [one question your audience genuinely asks]
Audience: [who, and what they already know]
They leave knowing: [the one answer] and able to [the one thing they can now do]
The dashboard shows: [the evidence]. The design piece says: [the message]. The trick helps by: [how].

WORKED EXAMPLE · MEERA'S STORY

Question: did our Diwali campaign pay off, and what should we repeat next year? **Audience:** the founder and the marketing team. **They leave knowing** the campaign's return and which channel earned it, **and able to** plan next year's budget. The dashboard shows the numbers; the one-pager gives three lessons; the trick turned her paper sketch into the dashboard's layout.

✓ CHECK You can say the question in one sentence, and each of the three pieces has a stated job.

02

30 MINUTES · DAY 1

Prepare real data you can trust.

01 Export the data as a CSV or spreadsheet. One table, one row per item, plain column headers on the first row.

02 **Remove personal data:** customer names, emails, phone numbers and addresses. Keep only the columns the story needs.

03 Work out three totals yourself, in a spreadsheet: these are your check figures for step 04.

04 Write the data's source and date range in one line. It goes on the dashboard and in the walkthrough.

WORKED EXAMPLE · MEERA'S DATA

`diwali-2026.csv`: 2,140 rows, one per order line, 15 October to 10 November, with date, channel, product, units, revenue and ad spend. Check figures: total revenue, total orders, total ad spend. Customer details removed before export.

✓ CHECK The file has no personal data, and you have three check figures and a one-line source.

03

60 MINUTES · DAY 2 · MODULE 3.2

Build the dashboard Artifact.

Attach the data to a Claude chat and describe the dashboard by what the audience needs to see, not by chart types alone. Ask it to define each number, so you can check it.

TEMPLATE · DASHBOARD PROMPT

Build an interactive dashboard as an Artifact from the attached data, for [audience], to answer: [the question].
Show: [3–5 headline numbers], [1–2 charts and what each compares], and [one table]. Add a filter for [field].
Use only the data in the file. Under each headline number, state how it is calculated. Show the data source and date range in the footer. Style: [brand colours and font].

WORKED EXAMPLE · MEERA'S PROMPT, WITH HER SKETCH ATTACHED

"Build an interactive dashboard as an Artifact from diwali-2026.csv for our founder, to answer whether Diwali paid off. Follow the layout in the attached photo of my sketch. Show revenue, orders, ad spend and return on ad spend as headline numbers; a line chart of daily revenue against daily ad spend; a bar chart of revenue by channel; and the top five products. Add a channel filter. Use only the data in the file, and define each number under it. Colours #191817, #FAFAF7 and #BD5A38."

01 Use it before you judge it: change the filter, hover the charts, read every label.

02 Iterate in the same chat, naming exact changes: *"Start the bar chart's axis at zero. Sort the products by revenue."*

✓ CHECK Every element answers part of your question, and the filter changes every number it should.

04

20 MINUTES · DAY 2

Check every number before anyone sees it.

01 Compare the headline numbers with your three check figures. They must match exactly, not roughly.

02 Ask: *"For each headline number, show the formula and how many rows it used."* The row count should match your file.

03 Check each chart: bar axes start at zero, dates cover your whole range, and labels say the unit.

04 Switch the filter to one channel and check one number against your sheet.

× AVOID Accepting a total that is "about right". A small gap usually means rows were dropped: often ones with commas or a ₹ sign inside the number.

✓ CHECK All three check figures match, and one filtered number matches your sheet.

05

60 MINUTES · DAY 3 · MODULE 3.3

Make the Claude Design piece.

The dashboard is the evidence. The design piece is the message: what the numbers mean, for someone who will not open the dashboard. Choose the form your audience actually reads: a one-pager, a short deck or a mockup.

`A Claude chat, or claude.ai/design` → `Attach references` → `Describe the piece` → `Refine` → `Export`

01 **Open Claude Design.** It now works inside any Claude chat. The standalone site at claude.ai/design stays open until 14 December 2026.

02 **Attach your references:** your brand guide or a document whose look you want, and a screenshot of the dashboard. Claude Design can read uploaded images, DOCX, PPTX and XLSX files.

03 **Describe the piece** with the prompt below. State the reader, the one message, the sections and the length.

04 **Refine it** through the chat and inline comments. Fix the message first, then the layout, then the details.

05 **Export it** as PDF, PPTX or HTML, or send it to Canva. Or share it as a link.

PROMPT · THE DESIGN PIECE

Make a [one-page A4 recap / 5-slide deck / mockup] for [audience]. The one message: [the answer to your question].
Sections: [list them, in order]. Use only the figures in the attached dashboard screenshot. Follow the look of the attached [brand guide]: [colours, fonts, tone]. No stock photos.

WORKED EXAMPLE · MEERA'S ONE-PAGER

A one-page A4 recap for the founder: the headline result, three numbers from the dashboard, three lessons for next Diwali, and one budget ask. She attached Lumen's brand guide and the dashboard screenshot. Her first round of feedback: "The headline says the campaign 'smashed targets'. Say the actual return, in one plain sentence." She exported the final version as a PDF.

× AVOID New numbers in the design piece. Every figure should already be on your checked dashboard.

✓ CHECK The piece states one message, every figure matches the dashboard, and you have the exported file or link.

06

30 MINUTES · DAY 3 · MODULES 3.5, 7.8

Do one cool trick, and capture it.

Choose your trick from the bonus round (3.5) or the thinking-partner list (7.8). Pick one that genuinely helped this demo, not one bolted on. It has to work again when someone else tries it from your walkthrough.

THE KIND OF TRICK THAT WORKS WELL HERE · USE YOUR MODULE LISTS FOR THE REAL OPTIONS

Sketch to layout	Photograph a hand drawing; Claude builds to that layout
Screenshot to rebuild	A screenshot of an old report becomes a live, editable version
Interview me first	"Ask me five questions before you build anything." Better brief, better first draft
Steelman the objection	"What would a sceptical founder say about this recap?" Then answer it in the piece

Capture it so a reader can repeat it.

01 The exact prompt, and anything you attached with it.

02 A before and after: two screenshots, or the input and the output side by side.

03 One line on why it is useful: what it saved or improved.

04 One line on when it does not work, so nobody is caught out.

WORKED EXAMPLE · MEERA'S TRICK: SKETCH TO LAYOUT

Prompt: "Follow the layout in the attached photo of my sketch." **Before:** a phone photo of four boxes and two charts drawn on paper. **After:** the dashboard in the same arrangement. **Why useful:** she got the layout she wanted on the first try instead of after four rounds. **When it fails:** faint pencil or tiny labels; she now draws in pen and writes labels in capitals.

✓ CHECK You have the prompt, a before and after, and both one-line notes. Run the trick once more to be sure it repeats.

07

90 MINUTES · DAY 4

Combine them into one walkthrough.

The walkthrough is the submission's spine. Write it for a reader who has never met you, has your files, and wants to make the same three things. Four to eight pages.

PART	WHAT GOES IN IT
Opening	The question, who it is for, and the three things the reader will make. One screenshot of each finished piece
Part 1 · Dashboard	The data and how you cleaned it, the prompt, the checks from step 04, the link
Part 2 · Design piece	The references you attached, the prompt, one round of feedback, the export
Part 3 · The trick	The prompt, the before and after, why it is useful, when it is not
Try it yourself	Each prompt in a copyable box, with what the reader should see after each
Files and links	Every file and link, named so the reader can find them

Every part follows the same four beats, so readers always know where they are.

BEAT 1

What it is

One sentence on the piece and its job in the story.

BEAT 2

Do this

Numbered steps with the exact prompt.

BEAT 3

You should see

A screenshot of the expected result.

BEAT 4

Check

How to tell it worked, and what to do if not.

01 **The HTML.** Download the dashboard Artifact as an HTML file and open it to confirm it works on its own. Or ask Claude for one HTML page that presents the walkthrough with all three pieces.

02 **The doc.** Write it in your usual editor, or ask Claude to draft it from your notes and screenshots, then check every step against what you actually did.

✓ CHECK Every part has all four beats, every prompt is copyable, and every link opens.

08

30 MINUTES · DAY 5

Test it with a newcomer, then fix it.

01 Give one person your walkthrough and files, and nothing else. Ask them to make the dashboard, at least.

02 Stay out of it. Note each point where they stop, ask, or do something you did not expect.

03 Fix the walkthrough at each of those points: a missing step, a vague instruction, a screenshot that does not match.

WORKED EXAMPLE · WHAT MEERA'S NEWCOMER HIT

Her colleague stopped at Part 1 because the walkthrough said "attach the data" without saying which file. Meera named the file, added a screenshot of the attach button, and moved the "Try it yourself" prompts next to each part instead of at the end.

✓ CHECK Each stopping point is fixed, and a second read finds no step that depends on you.

09

15 MINUTES · DAY 5

Package it, then submit.

BEFORE YOU SUBMIT

- [ ] One story question, stated on page one
- [ ] Dashboard from real data, three figures checked
- [ ] Design piece made in Claude Design, exported
- [ ] Trick captured: prompt, before, after, why
- [ ] Walkthrough tested by a newcomer, then fixed
- [ ] HTML file opens on its own
- [ ] No personal data anywhere

IF SOMETHING GOES WRONG

No Artifact appears	Ask: "Show this as an Artifact."
Totals do not match	Look for numbers stored as text, with commas or ₹ inside. Clean them, re-attach.
No Claude Design	Needs a paid plan. On Enterprise, ask your admin to turn it on.
Design ignores your brand	Attach the brand guide again and name the colours and fonts in the prompt.
The trick fails on repeat	Choose a different trick. Only show what reproduces.

Name files so the reader can match them to the walkthrough: `01-walkthrough.pdf`, `02-dashboard.html`, `03-design-piece.pdf`, `04-data.csv`.
